

# PhishProtect™

*Real-Time A.I Powered In-Browser Zero-Day Phishing Prevention*

---

## Phishing is the #1 One Attack Method

There is no cyber attack more prevalent and consistently effective than phishing. Organizations deploy multiple layers of security technologies to prevent, detect, and respond to cyber threats. But even with these controls in place, organizations are still far more likely to be compromised via phishing than any other attack method.

Even with record investments in technology, talent and training the number of breaches attributed to phishing attacks continues to grow, as the shift to the cloud creates a massive opportunity for cybercriminals to target these websites.

---

## A.I. Powered Zero-Day Phishing Protection

PhishProtect™ cyber-security platform closes this gap with three innovative technologies and capabilities needed to deliver real-time zero-day phishing prevention across the broadest range of browsers and operating systems in today's heterogeneous computing environment: Proactive Analysis, A.I and Computer Vision.

---

## How It Works

1

### *Proactive Analysis*

A.I and computer vision engine proactively index websites of top brands around the world

2

### *Real-Time Monitoring*

PhishProtect™ Lightweight-Browser extension continuously uploads the visual representation of every accessed web-page to PhishProtect™ cloud in real-time

3

### *Real-Time Prevention*

PhishProtect™ Cloud analyzes the visual representation of every web-page, detects the phishing sites and reports back to the browser extension to block the web-page and prevent the attack.

4

### *Automated Analysis*

High fidelity intelligence is generated for every phishing attack, including the attacker's source, location and targeted brand.

# Solution Benefits

## 1 Real-Time Zero-Day Phishing Prevention

Lightweight browser extension sends visual representation to PhishProtect™ cloud to be analyzed in real-time and block phishing sites immediately.

## 2 Discover insights into phishing attacks on your organization

Get insights into the most targeted brands, domains and countries of the phishing attacks on your organization and be ready for the next wave of attack.

### 3 Automated Analysis

High fidelity attack intelligence including attacks' source, ip, geolocation and attacked brand.

### 4 Heterogeneous Computing Environment

PhishProtect™ browser extension supports any major browser - Chrome, Internet Explorer, Safari and Firefox to address today's heterogeneous computing environment in organizations.
